UI/UX Designer

Hello!

My name is **Erra Faninditya Fadilla Usmanto**, I was born in **Jakarta, August 28th, 2001**. I am currently studying at Syarif Hidayatullah State Islamic University Jakarta majoring in Informatics Engineering. I have an interest in designing a website and mobile application. I am also interested in making logos and making posters for social media

Santrend 1.0

Year : 2021

UI/UX Design for Mobile App

At the beginning of 2021, to be precise in April, together with 2 of my friends, I made this project which was assigned by our lecturer, where the task that I did was to make the UI/UX Design of the application.

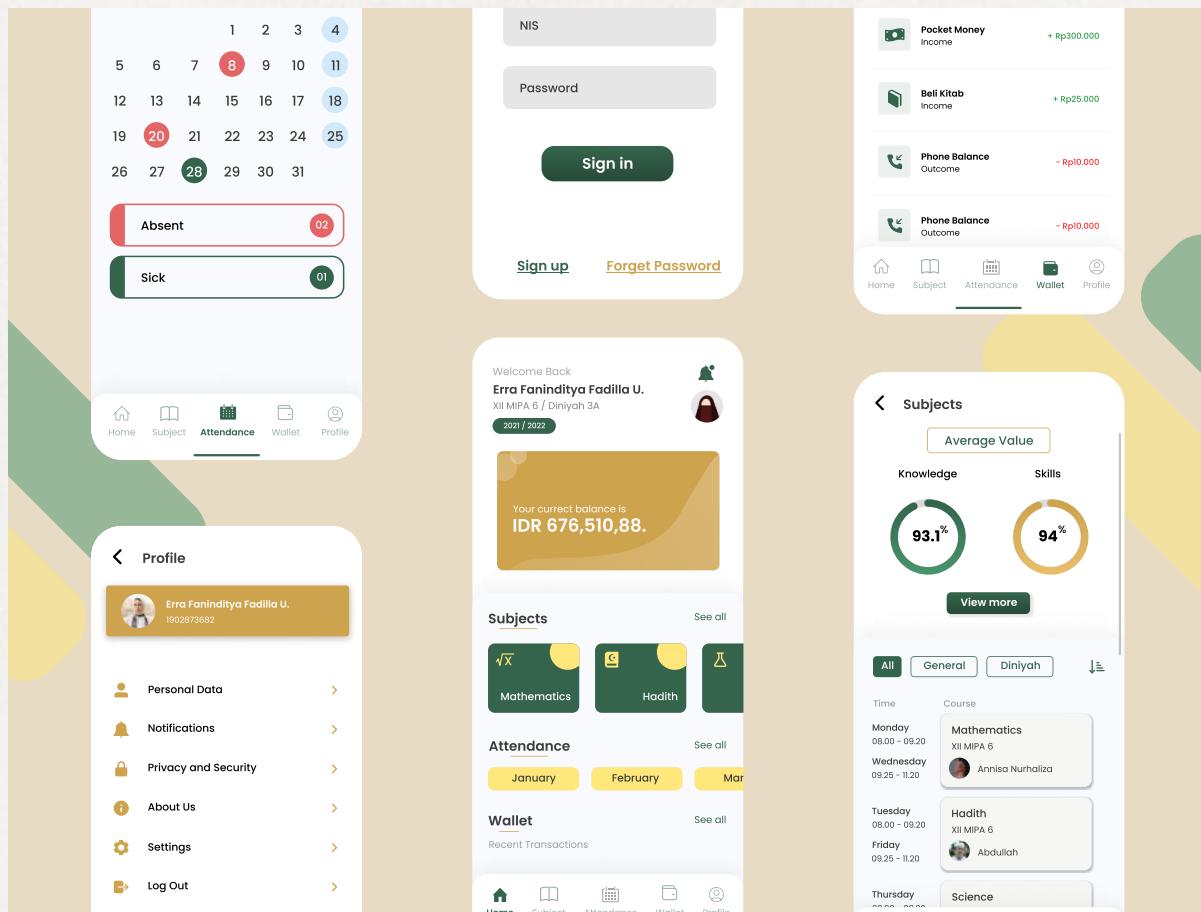

As a result, our lecturers liked the idea we came up with because nowadays technology is rarely used by Islamic boarding schools "Pesantren" due to the prevailing regulations.

Therefore, I am happy to work on this project and be able to make "Pesantren" become a school that starts using technology

Santrend 2.0

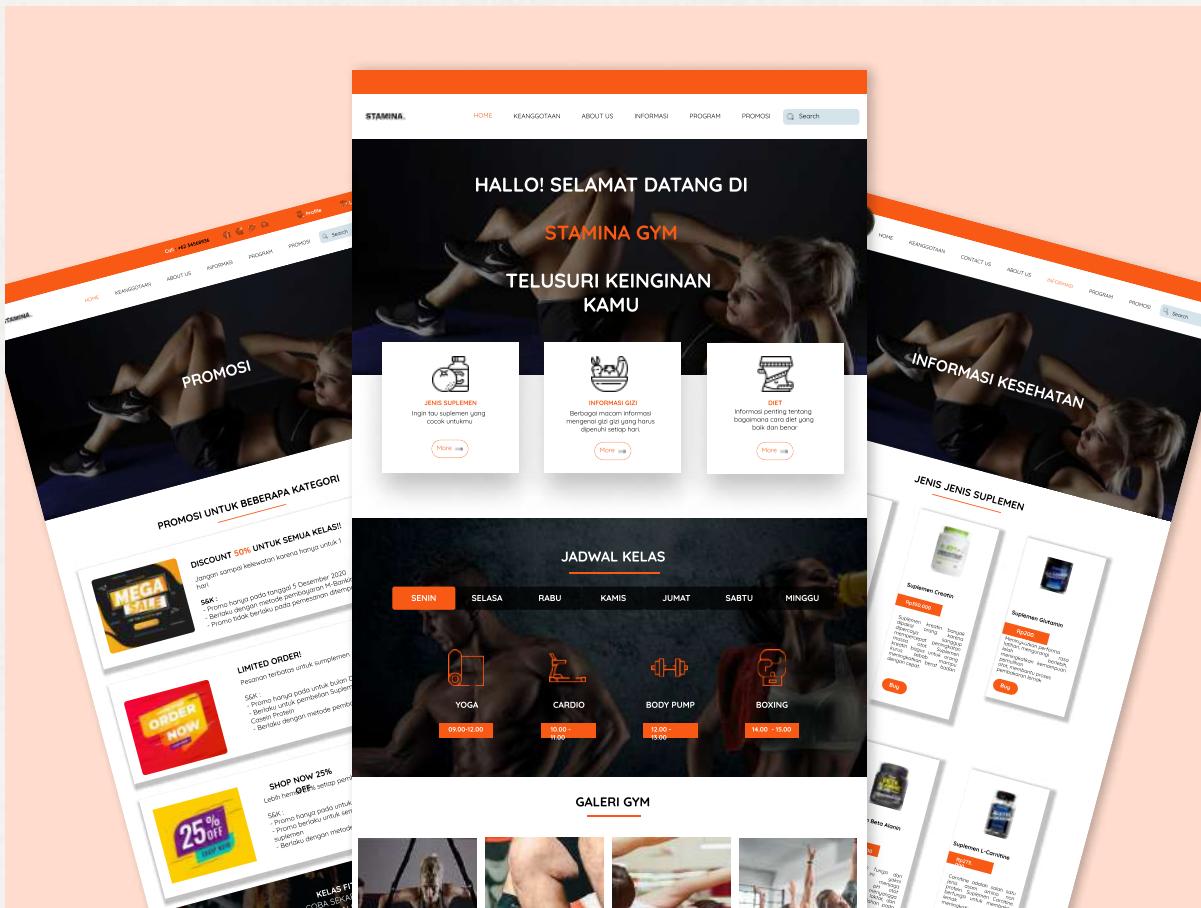

Year : 2022

UI/UX Design for Mobile App

At the beginning of 2022, I redesigned the Santrend app that I made earlier. In early 2022, I designed an application, the application was an assignment for one of the courses in my major. This application is an information system application for an Islamic boarding school whose targets are parents of students.

This application provides savings, attendance, student grade lists, and also through this application parents can also monitor their children's financial data. This application also provides a card to make calls on public telephones of Islamic boarding schools by utilizing the NFC feature on the card.

Stamina Gym

Year : 2020

UI/UX Design for Website

In 2020, I was given an assignment by my lecturer to make an application according to the theme discussed by the group. My group decided to create a web-based application with a sports theme. I was assigned to make UI/UX Design of the application, this was my first experience and project before I decided to go into design

MERAKI

Year : 2021

UI/UX Design for Mobile App

In 2021, my campus will hold a competition, namely "SAINTEK ENTREPRENEUR COMPETITION". I worked on this project together with 2 of my friends. We named our project MERAKI. MERAKI is an application that aims to accommodate UMKMs in Indonesia. By using the MERAKI application, UMKM players will find it easier to sell goods such as recycled goods, as well as goods made by themselves. In addition, with this application users can learn with classes provided such as cooking, sewing, knitting and others. Finally, we got 3rd place in the competition

Musicday

Year : 2022

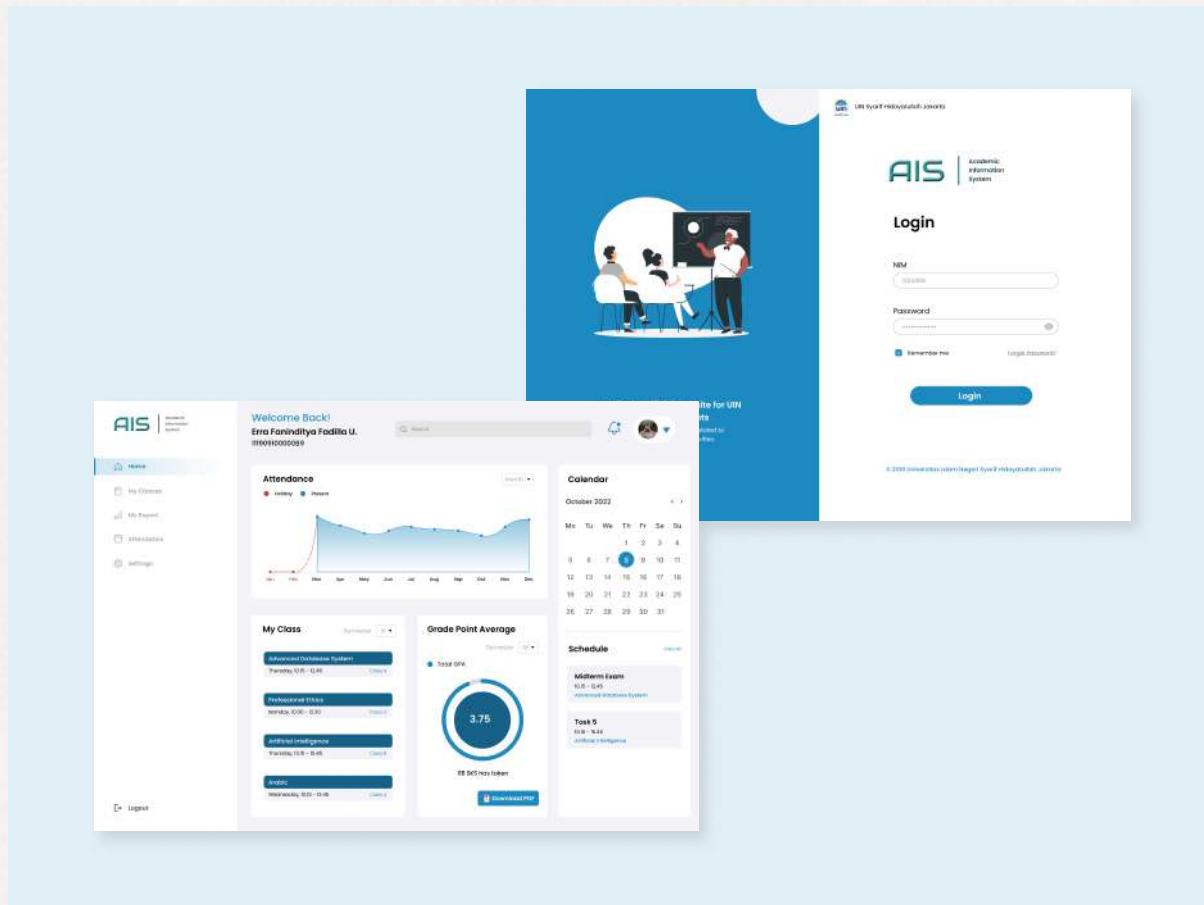

UI/UX Design for Mobile App

In 2022, I found some music apps that have a key search feature, but not songs and not all musical instruments. Therefore, I made an application in terms of the interface. I made this application by adding a feature to display songs and also keys along with the musical instrument the user wants to play. With this application users can listen to songs, see chords according to what the user wants

Redesign AIS UIN Jakarta Website

Year : 2021

UI/UX Design for Website

In 2020, when I saw the UIN Jakarta information system website, it needed to be developed and improved in terms of appearance. So, I want to redesign the website to make it look more user friendly

Redesign KPI Website

Year : 2021

Design for Instagram Feed

In 2022 to be precise, in April I did an internship at one of the government agencies, namely KPI (Indonesian Broadcasting Commission). I was given the task of redesigning the KPI website to make it more attractive when users visit the website. According to a survey I did, there are still many people who don't know about the website and have not taken advantage of the features on the website, the reason being that the appearance of the website is not user friendly. Therefore, I made the appearance of the website so that it is easily understood by the user and also attracts the attention of the user 2022 to use the website
